

Hello - I'm making comments on the proposed 5mhz Amateur Radio Allocation.

First - it's a very exciting prospect for all of us to be getting an allocation between 40 and 80 meters - I hope it will be approved in the near future.

I'd like to see all Amateurs (General and Above) have full access to this new band to maximize it's use.

Also - I think it would be beneficial to all to allow 1500 Watts PEP output (current Amateur Maximum Legal Limit) on this band.

Finally, it would be a good idea to segment the band such that there was a section for CW operators, a section for digital and narrow band transmissions, and a separate section for SSB.

Thank you for your consideration, and I'm looking forward to using the new band.

Best Regards,

James A. Nitzberg    WX3B
